S4/L taking it very abstractly; don't consider the impact ~~is~~ then
action will have on individual human beings. It's just something
they've planned and they'll go thru w/ it come hell or high water

methodical

echo

54/2 sense of viewing "target" location from slightly higher elevation do or to look down on it.

Observing

54/2 sense of firing something - allowing for travel time, distance, arcing, impact - solid connection with intended goal. People involved experience solid feeling of satisfaction - "job well done" - about that part. Occurs at time of limited visibility - early morning / Early evening / inclement weather. Visibility conditions chosen because some light necessary for mission accomplishment but low vis. aids in successful attack/then escape. Some people involved wearing tan or light olive clothing. Considerable distance between "launch" point & impact.

Als / Air Br attack maybe conducted from Aircraft.

As L Br
Pearl Harbor

54/2 Sense of satisfaction is great because "target" structure is regarded as highly protected, and hence essentially safe. This activity seen connected to other activity elsewhere, may, besides it, direct purpose, also serve to distant from other crucial operation elsewhere which is less overt but equally important + may have to do a tactical physical penetration by a small group of a guarded, secured area, & escaping w/ some desired individual.
